

Main BuyWrite ETF

BUYWX

a Series of Northern Lights Fund Trust IV

SUMMARY PROSPECTUS

August 15, 2022

Before you invest, you may want to review the Fund’s Prospectus, which contains more information about the Fund and its risks. The Fund’s Prospectus and Statement of Additional Information, both dated August 15, 2022, are incorporated by reference into this Summary Prospectus. You can obtain these documents and other information about the Fund online at www.mainmgffunds.com. You can also obtain these documents at no cost by calling 1-855-907-3373 or by sending an email request to ordermainmanagementfund@UltimusFundSolutions.com.

Investment Objective: The Fund seeks to provide total return, from current income and gains from long-term capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.95%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.16%
Acquired Fund Fees and Expenses ⁽²⁾	0.20%
Total Annual Fund Operating Expenses	1.31%

(1) Estimated for the first year.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund, not the indirect costs of investment companies.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$133	\$415

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. The Fund has not commenced operations as of the date of this Prospectus.

Principal Investment Strategies: The Fund invests in domestic and international exchange-traded funds (ETFs) to provide investors with sustained exposure to domestic and foreign equity markets over time. The Fund also uses the Adviser's "BuyWrite" strategy, an investment strategy of writing (selling) call options on a security owned by the Fund to generate additional returns from the option premium. The Fund also seeks returns by writing (selling) secured put options. A "put option" is an option contract that gives the owner the right to sell the underlying security at a specified price (the strike price) until its expiration at a fixed date in the future. The Fund seeks to achieve risk-adjusted returns through targeted allocations by analyzing interest and currency rates, inflation trends, economic growth forecasts, and other global and capital market fundamentals. The Fund's option strategy may also have the benefit of reducing the volatility of the Fund's portfolio in comparison to that of broad equity market indexes.

The Fund is an actively managed ETF and does not seek to replicate the performance of a specified index. In selecting investments for the Fund's portfolio, the Adviser adheres to the investment process described below.

Equity Strategy

The Adviser believes that, over time, asset allocation is more determinative than individual security selection in limiting the variability inherent in equity security investing. Accordingly, the Adviser, when investing in ETFs, focuses its research primarily on asset allocation to identify undervalued asset classes and catalysts that could lead to near-term price appreciation by carefully reviewing:

- the sector (industries sharing common characteristics; e.g., financials),
- sub-sector (a more specialized, narrow category within a sector; e.g., financials), and
- capitalization (the measure of a company's size as determined by its current share price multiplied by the number of shares of the company's outstanding stock) in the Fund's portfolio.

The Adviser seeks to create a diversified portfolio to avoid allocations of more than 50% to any one particular market segment.

Developing Strategic Targets. The Adviser determines the Fund's target allocations by:

- analyzing global macroeconomic and capital market fundamentals over a 12-18 month time horizon and
- formulating strategic targets for allocations.

Identifying the Appropriate ETFs. After developing the strategic targets, the Adviser uses a combination of bottom-up fundamental valuations (e.g., price to book, price to earnings, and price to sales ratios) and top-down macroeconomic data points to identify the most appropriate fixed income and equity ETFs, without restriction as to geography or market capitalization, to implement strategic asset allocation and express sector views by evaluating various factors in the respective ETFs. The Fund will generally hold between 4-10 ETFs, but that number will change in different market conditions. Based on the Adviser's analysis, the ETFs held by the Fund may, at certain times, be in one particular sector, but the ETF will not concentrate in any one particular industry.

Option Strategy

The Fund pursues its objective by employing an option strategy of writing (selling) covered call or index based options on an amount from 0% to 100% of the value of the ETF shares in the Fund's portfolio. The Fund seeks to earn income and gains both from dividends paid on the ETFs owned by the Fund and cash premiums received from writing or "selling":

- covered call options or index based options on equity based ETFs held in the Fund's portfolio and
- cash secured put options against cash balances in the Fund.

The Fund will "cover" its obligations when it sells options or will earmark or segregate cash or liquid securities in accordance with applicable interpretations of the staff of the Securities and Exchange Commission (the "SEC"). The Fund may not sell "naked" put or call options, i.e., equity options representing more shares of an ETF than the Fund has cash on hand and available to purchase or index options greater than the value of the underlying security.

Stock index options are put options and call options on various stock indices. The primary difference between stock options and index options occurs when index options are exercised. In the case of stock options, the underlying security, common stock, is delivered. However, upon the exercise of an index option, settlement does not occur by delivery of the securities comprising the index.

The option holder exercising the index option receives an amount of cash if the closing level of the stock index upon which the option is based is greater than, in the case of a call, or less than, in the case of a put, the exercise price of the option. This amount of cash is equal to the difference between the closing price of the stock index and the exercise price of the option expressed in dollars time a specified multiple.

A stock index fluctuates with changes in the market value of the stocks included in the index. A call option on a security is a contract that gives the holder of the option, in return for a premium, the right, but not the obligation, to buy from the writer of the option the security underlying the option at a specified exercise or "strike" price by or before the contract's expiration. A put option on a security is a contract that gives the holder of the option, in return for a premium, the right to sell to the writer of the option the security underlying the option at a specified exercise or "strike" price. The writer of an option on a security has the obligation upon exercise of the option to purchase the underlying security at the exercise price. The Adviser's option strategy typically targets one-month options. Options of any exercise price or maturity may be utilized.

Principal Investment Risks: *As with all mutual funds, there is a risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program. Many factors affect the Fund's net asset value ("NAV") and performance.*

The following describes the risks the Fund bears directly or indirectly through investments in the underlying ETFs in its investment portfolio. As with any ETF, there is no guarantee that the Fund will achieve its goal.

Allocation Risk. If the Fund's strategy for allocating assets among different assets classes does not work as intended, the Fund may not achieve its objective or may underperform other funds with the same or similar investment strategy.

Authorized Participant Risk. Only an Authorized Participant that has entered into a contractual arrangement with the Fund's distributor may engage in creation or redemption transactions directly with the Fund. The Fund's distributor has entered into contracts with only a limited number of institutions that may act as Authorized Participants on an agency basis (*i.e.*, on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem large blocks of Shares known as "Creation Units," Shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for ETFs that invest in non-U.S. securities or other securities or instruments that have lower trading volumes.

Exchange-Traded Funds Risk. The ETFs in which the Fund invests will not be able to replicate exactly the performance of the indices they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. This may result in a loss. Certain securities comprising the indices tracked by the ETFs may, from time to time, temporarily be unavailable, which may further impede the ETFs' ability to track their applicable indices. ETFs in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the ETF and may be higher than other mutual funds that invest directly in stocks and bonds. ETFs may also trade at a discount or premium to their net asset value.

ETF Structure Risk. The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable to retail investors and may be redeemed by the Fund only to Authorized Participants at NAV in Creation Units. An Authorized Participant may incur brokerage costs purchasing enough Shares to constitute a Creation Unit.
- *Trading Issues.* An active trading market for the Shares may not be developed or maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange. If Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for Shares.

- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in Shares and in executing trades, which can lead to differences between the market value of Shares and an ETF’s NAV.
 - To the extent Authorized Participants exit the business or are unable to process creations or redemptions and no other Authorized Participant can step in to do so, there may be a significantly reduced trading market in Shares, which can lead to differences between the market value of Shares and the Fund’s NAV.
 - The market price for Shares may deviate from the Fund’s NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Shares than the Fund’s NAV, which is reflected in the bid and ask price for Shares or in the closing price.
 - When all or a portion of the Fund’s underlying securities trade in a market that is closed when the market for Shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Shares and the Fund’s NAV.
 - In stressed market conditions, the market for Shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of Shares and the Fund’s NAV.

Fluctuation of Net Asset Value Risk. The NAV of Shares generally fluctuates with changes in the market value of the Fund’s holdings. The market prices of Shares generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund’s holdings trading individually or in the aggregate at any point in time. In addition, unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. Index based ETFs have generally traded at prices which closely correspond to NAV per share. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which Shares will trade at premiums or discounts to NAV.

Foreign Investment Risk. Since the Fund’s investments may include foreign securities, the Fund is subject to risks beyond those associated with investing in domestic securities. Foreign companies are generally not subject to the same regulatory requirements of U.S. companies thereby resulting in less publicly available information about these companies. In addition, foreign accounting, auditing and financial reporting standards generally differ from those applicable to U.S. companies.

Management Risk. The portfolio managers’ judgments about the attractiveness, value and potential appreciation of particular stocks or other securities in which the Fund invests or sells short may prove to be incorrect and there is no guarantee that the portfolio managers’ judgment will produce the desired results.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund’s portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, climate-change and climate related events pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Options Risk. There are risks associated with the sale and purchase of call and put options. As a seller (writer) of a put option, the Fund will tend to lose money if the value of the reference index or security falls below the strike price. As the seller (writer) of a call option, the Fund may experience lower returns if the value of the reference index or security rises above the strike price.

Sector Risk. The Fund may have significant exposure to a limited number of issuers conducting business in the same sector or group of sectors and may invest a significant amount of the Fund's assets in a small number of sectors. Market conditions, interest rates, and economic, regulatory, or financial developments could significantly affect a single sector or a group of sectors, and the securities of companies in that sector or group of sectors could react similarly to these or other developments.

Small and Medium Capitalization Stock Risk. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures and may have limited markets, product lines, or financial resources and lack management experience.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.mainmgtsetfs.com or by calling 1-866-ETF-XPRT (1-866-383-9778). Updated performance information is available at no cost by visiting www.mainmgtfunds.com or by calling 1-855-907-3373.

Portfolio Managers: Kim D. Arthur, Chief Executive Officer of the Adviser, James W. Concidine, Chief Risk Officer of the Adviser, J. Richard Fredericks, Managing Director of the Adviser, and Alex Varner, Director of Research of the Adviser, have served the Fund as its portfolio managers since it commenced operations in 2022.

Purchase and Sale of Fund Shares: Individual Shares of the Fund may be purchased and sold in secondary market transactions through a broker dealer or at market price. Shares are listed for trading on the Exchange and trade at market prices rather than NAV. Shares may trade at a price that is greater than, at, or less than NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the second market (the "bid-ask spread"). Because the Fund has only recently commenced investment operations, no information on the Fund's net asset value, market price, premiums and discounts and bid-asks spreads is presented at this time. In the future, this information will be presented in this section of the Prospectus and on the Fund's website at www.mainmgtetfs.com.

Tax Information: The Fund's distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
