## Main International ETF

The Main International ETF (INTL) is a global non-U.S. equity strategy that invests by using broad country and sector ETFs. The fund is able to allocate towards regions, countries and international sectors that stand out as favorable based on valuations and growth prospects.

## HOW IT WORKS

**START**  
The strategy employs a top-down assessment to identify undervalued economic regions, countries and sectors

**NEXT**  
Rigorous fundamental analysis and a proprietary weighing methodology are key components of a disciplined allocation process

**FINALLY**  
Tactical allocations will be used to anticipate and respond to opportunistic shifts in the market

## POTENTIAL BENEFITS

Diversification through broad international ETF exposure

---

Aims to contribute towards portfolio growth

---

Ability to raise up to 20% Cash and Short-Term Fixed Income

## WHERE IT FITS & WHY

The Strategy acts as a supplement to core U.S. equity to provide targeted international exposure while maintaining diversification.

This strategy may work well when international equities are outperforming relative to U.S. equities.

Main International ETF (INTL) complements well with:

- U.S. Equity
- Fixed Income
- Alternatives

International exposure may vary based on risk tolerance and appetite for international equities exposure.

**FUND'S RISK DISCLOSURES** There is the risk that you could lose money through your investment in the Fund. The Fund may have significant exposure to a limited number of issuers conducting business in the same sector or group of sectors. Market conditions, interest rates, and economic, regulatory, or financial developments could significantly affect a single sector or a group of sectors. ETF's are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks could include liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few. As a seller (writer) of a put option, the Fund will tend to lose money if the value of the reference index or security falls below the strike price. As the seller (writer) of a call option, the Fund may experience lower returns if the value of the reference index or security rises above the strike price. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.
