

**Covered Call Option Writing**

**Seeks** To provide total return, from current income and gains from long-term capital appreciation.

**Use for** A core holding within your Alternative Allocation.

**Fund Objective**

The Main Management BuyWrite ETF (BUYW) is a hedged equity strategy that targets lower volatility and generates monthly income.\* The BuyWrite ETF (BUYW) targets a 6% annualized distribution yield and is managed in a tax-aware manner.\* The fund contains a global equity asset allocation with a covered call option overlay. The annual target return is mid to high single digits.

**Investment Strategy**

Main Management Fund Advisors (MMFA) is a value investor and seeks to own investments at attractive valuations. In order to avoid the classic "Value Trap", MMFA seeks a catalyst that should lead to near-term price appreciation (mean reversion). MMFA will look across markets and asset classes in search of value. The underlying asset allocation is implemented with exchange traded funds (ETFs).

Call options may be sold on 0–100% of the underlying ETF portfolio holdings in order to generate premium income which may provide an additional source of portfolio return and may reduce overall portfolio volatility. Options may be written in, at, or out of the money on a position by position basis in order to target a specific level of the possible upside participation of the portfolio. Options which have been written are monitored on a daily basis and may be purchased back in order to optimize the portfolio.

**FUND'S RISK DISCLOSURES**

*There is the risk that you could lose money through your investment in the Fund. The Fund may have significant exposure to a limited number of issuers conducting business in the same sector or group of sectors. Market conditions, interest rates, and economic, regulatory, or financial developments could significantly affect a single sector or a group of sectors. ETF's are subject to specific risks, depending on the nature of the underlying strategy of the fund. These risks could include liquidity risk, sector risk, as well as risks associated with fixed income securities, real estate investments, and commodities, to name a few. As a seller (writer) of a put option, the Fund will tend to lose money if the value of the reference index or security falls below the strike price. As the seller (writer) of a call option, the Fund may experience lower returns if the value of the reference index or security rises above the strike price. Investments in foreign securities could subject the Fund to greater risks including, currency fluctuation, economic conditions, and different governmental and accounting standards. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.*

*\* Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in Shares and as capital gain thereafter. A distribution will reduce the Fund's NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.*
